SEASON OF KDE

Season of KDE

Season of KDE is an outreach program hosted by the KDE community.

Every year since 2013, KDE has been running Season of KDE (SoK) as a program similar to, but not quite the same as Google Summer of Code. SoK offers everyone an opportunity to participate in both code and non-code projects which benefit the KDE ecosystem. In the past few years, participants have not only contributed to new software features, but have also developed the KDE Continuous Integration system, created statistical reports for developers, ported KDE Applications, written documentation, and lots more.

For some inspiration for your proposals, take a look at our Ideas page for the year you would like to contribute.
